Description of the equipment

Roll Forming Machine

Main Base

The main base is MS fabricated structure and adequately ribbed to minimize the distortion. It is accurately machined on top and bottom surfaces the threaded holes are made on the bed for positioning the stands.

Entry Guide

The entry side of the machine will be equipped with guide table and the guide bar which will be responsible for centering the leading ends of the strip into the first pass.

Mill stands

The stands are mounted on the bed of the machine the line alignment can be easily done due to threaded holes arranged on the bed of the machine. Each forming head consists of a fixed housing and sliding type out board housing. The mill stands will be arranged to locate shafts mounted on anti-friction bearings. For the top shafts the bearings are housed in the cartridge type bearing blocks. The bottom shaft bearings are located in the bored machined in the housings. The bottom arbors are fixed in position whereas the top arbors along with cartridge blocks could be raised or lowered in vertical guides machined in housings.

Roll shafts

The roll shafts will be manufactured from quality steel and will be keyed to locate tooling.

Drive
